

CentOs to Red Hat Enterprise Linux[®] Accelerator

Deliver consistency across datacenters & clouds
via open, secure, and supported Linux

CentOS to Red Hat Enterprise Linux Accelerator

The Situation

Organizations require IT departments to drive efficiencies and deliver top performance to the business, and IT teams are expected to do it economically. That's why free, unsupported open source software options are tempting, because they can reduce the expense of licensing and subscriptions.

CentOS Linux is freely available and meets the economic needs for the business. CentOS is a Red Hat Enterprise Linux derived community-supported Linux distribution that was developed, distributed, and maintained by the CentOS Project community (<https://www.centos.org/>). Support for CentOS 8 was discontinued on December 31, 2021 and CentOS Linux 7 on June 30, 2024.

It's crucial to have an OS that is reliable, secure and stable. **Red Hat Enterprise Linux** provides high value and lower overall costs over time by providing a defined patch maintenance schedule, roadmaps, full and extended life support, and a large ecosystem of certified partners. RHEL delivers consistency across the open hybrid cloud—including physical, virtual, private clouds, public clouds, and edge deployments and requires little re-training of staff.

Stone Door Group offers the CentOS to RHEL Accelerator for businesses looking to make the transition.

The Stone Door Group CentOS to **Red Hat Enterprise Linux** ("RHEL") Accelerator delivers all of the software subscriptions and professional services needed to migrate from CentOS to RHEL. Coupled with limited time pricing for up to a free year of **Red Hat** subscriptions, our Accelerator offers packages to accommodate migrations of any size.

CentOS to RHEL Accelerator Business Outcomes

Migration from CentOS Linux to **Red Hat Enterprise Linux** via a Stone Door Group Accelerator provides benefits from a certified reference architecture, long-term life cycle

support, a large partner ecosystem, and built-in security features. **Red Hat Enterprise Linux** has a lower total cost of ownership (TCO) over time compared to an unpaid, unsupported OS. Because CentOS Linux was derived from **Red Hat Enterprise Linux** sources, users migrating to RHEL can continue to use many of the same techniques and elements with minimal training, while gaining more features, tools, support, and value.

Transparent Pricing

Stone Door Group offers Cost +5% Transparent Pricing for all Red Hat subscriptions. Whether you qualify or not for CentOS to RHEL migration incentives, we are committed to providing the best pricing to our customers.

CentOS to RHEL Accelerator Services DataSheet

Implementation Services Overview & Pricing

Stone Door Group Offers packaged CentOS to RHEL services offerings for enterprises of any sizes

Implementation Services

Document existing CentOS architecture

Map architecture to Red Hat Enterprise Linux

Deploy Red Hat Satellite 6 for provisioning and updates

Deploy Ansible for day 2 operations

Deliver training and documentation

Ongoing Services

Enrollment in SDG's Renewal+ program which includes:

Enroll in Cost
+5% Transparent
Pricing.

Continuing
education through
Dedicated Private
Workshop ("DPW")

Ongoing strategic
engagement
through Elite
Account Service
("EAS")
