Business Continuity and Disaster Recovery Accelerator

Protect Your Business from Cyber Attacks with Disaster Recovery

Can your Business Survive a Ransomware Attack?

The depth and sophistication of ransomware attacks on companies lately have many IT organizations scrambling for security solutions. A recent study by Recorded Future — a security firm that tracks ransomware attacks — estimated that last year, there was one ransomware attack every eight minutes, totaling 65,000 successful ransomware attacks¹.

Most of the focus on IT security threats revolves around monitoring prevention. Backup software company Veritas states every 11 seconds, an organization is hit with an attack². Many IT teams have defensible incident response for simple attacks. Very few have a business continuity and disaster recovery (“BCDR”) plan for ransomware and other catastrophic events. For those who do have a BCDR strategy, it consists of a combination of software and manual process to recover servers. These solutions are rarely tested and do not consider full application services recovery³.

Stone Door Group offers a turnkey software and services offering that delivers all the required automation frameworks and testing to successfully implement BCDR for these unthinkable events.

Ansible Automation Platform: The Simplest Way to Automate your Disaster Recovery Plan

Our Business Continuity and Disaster Recovery Accelerator combines Red Hat Ansible Automation Platform with Stone Door Group experience to deliver a best practices Business Continuity and Disaster Recovery automation framework. If you are concerned about ransomware or other catastrophic events, we deliver the BDCDR framework, automated failover, and “Game Day” testing.

Services Goals

The Business Continuity and Disaster Recovery Accelerator is built on Red Hat Ansible Automation Platform and includes the following professional services:

Review existing Business Continuity and Disaster Recovery Plans

Install and configure Ansible Automation Platform in a highly available multi-datacenter configuration

Transform manual disaster recovery processes into automated Ansible playbooks

Tune Ansible services to comply with customer RTO and RPO objectives

Perform Game Day simulations that test the Ansible failover and failback solution

Provide training and enablement of IT staff to perform disaster recovery procedures

Our objective is to deliver a complete, practical, and tested DR strategy to enterprises of any size and provide peace of mind to IT leaders that they are prepared for ransomware attacks.

- Darren Hoch

President Stone Door Group

Services Overview

The services engagement implements a best practices production instance of a Red Hat Ansible Automation Platform to serve as a basis for future DR automation development.

Project Duration - 5 Weeks

Project Team - Project Manager, Architecture, Senior Consultant

Plan

Weeks 1-2

Review BCDR policy, define architecture, plan Ansible implementation

Execute

Weeks 3-4

Install Ansible, Deploy BCDR playbooks, develop app failover playbooks

Enable

Weeks 5

Execute gameday BCDR simulation, Enable

Business Outcomes

Upon completion of the Business Continuity and Disaster Recovery Accelerator, customers can expect the following business outcomes:

- **Minimize financial losses** and reputational damage with a fully tested Business Continuity and Disaster Recovery Plan (BCP/DRP) that ensures your organization can continue to operate in the event of a cybersecurity event.
- **Reduce Recovery** Time Objective (“RTO”) to 1 hour.
- **Eliminate the need for manual intervention** during failovers and failbacks, reducing labor costs and improving the speed of recovery by **90%** or more.

Customer Use Case - National Retail Furniture Chain

Stone Door Group worked with a national furniture retail company who had identified both ransomware and major weather events as their greatest risks to business continuity. The customer had no disaster recovery solutions and store recovery time of 4 weeks.

Technical Implementation Services

- Migrated all store servers from CentOS to Red Hat Enterprise Linux
- Implemented a common Identity and Access (“IAM”) solution using Red Hat Identity Manager
- Developed an Azure HA Ansible control plane
- Developed disaster recovery for stores to failover and fail back to the cloud

Engagement Business Outcomes

Significant reduction of ransomware risk through standardization

99% Improvement in Recovery Time Objective (RTO) - 4 Days to 1 Hour

99% Improvement in Recovery Point Objective (RPO) - 4 Days to 4 Hours

About Stone Door Group

Stone Door Group is a Red Hat Premier Reseller that specializes in the implementation of Red Hat enterprise solutions. We retain a large bench of certified consultants with 500,000 hours of Red Hat consulting experience who are ready to assist in delivery of the most pressing customer IT initiatives.
